

Control and Signaling Devices Ø 22.5 Metal Series

Control and signalling devices Ø 22,5

This range of Ø 22,5 pushbuttons, selector switches, @uminated switches, @uminated selector switches and pilot lights have been designed to provide the following salient features:

- . Fixing method unaffected by excessive vibration-unit does not rotate
- · Protection against electric shock (unit earthed)
- SELF WIPING CONTACT
 Robust in materials of construction
 Safe in operation
 - Very good flame resistance.
 - · Shrouded terminals

Actuators

The circular actuators have chrome plated metal bezels, and are interchangeable on the different types of contact elements,

Contact elements

The contact elements are double break and have self wiping contacts. The elements are interchangeable and can be stacked without additional hardware, 1 to 6 elements (NO or NC) can be used with non illuminated actuators, whereas, 1 to 4 elements (NO or NC) can be used for illuminated actuators, Gold plated NO and NC contact elements for low voltage, low current switching circuits < 25 mA, are available.

Illuminated pushbuttons and pilot lights

Pliot lights and illuminated switches are suitable for direct connection, through series resistor, through series resistor and diode, using bayonet cap filament bulb type BA9S, as follow:

Supply voltage for direct connection without series resistor ... 12V-415V 230V AC

Filament, type BA9S with OAL max., 28 mm LED illuminated actuators & pilot lights are available with integral LED, LED in bayonet cap suitable for operating at various voltages namely 6V, 12V, 24V, 30V, 48V, 110V, 230V, AC or DC and 415V AC, LED bulbs with bayonet cap are constructed in the standard BA9S design with OAL max, 28 mm, On request an extra short circuit protection consisting of built in fuse in the LED modules can be provided.

Pliot lights are available with built in transformers suitable for operating at 230, 110 volts AC input and 6V, 12V and 24V output.

Terminals

Contact elements and pilot lights are designed to have shrouded terminals with combi screws,

Fixing

The control devices Ø 22.5 can be fixed in any position on panels of 1 to 6 mm thickness. We recommend minimum fixing centers of 30 mm X 40 mm. However, the dimensions and configuration should be decided on the basis of the application. The actuators and the lense assemblies lock on to the holding bracket using a bayonet type of fixing which enables a simple and fast assembly. The complete assembly is locked into position on the panel by two M4 pointed screws on the bracket, tightened equally from the rear, The screws should be tightened adequately to such an extent as to pierce through the paint on the panel from inside. These screws also ensure the earthing of the unit.
